What

is Simulation-based Inference?

- If we know generating factors, we can build a simulator
- But we want to constrain simulator output on observations from real world
- Thus we need realistic values for simulator parameters
- -> inverse problem
- SBI solves this inverse problem using Bayesian inference

Why

do we need Simulation-based Inference?

- Finding parameters/posterior over parameters with

 - Markov Chain Monte Carlo ABC
 - Sequential Monte Carlo ABC

How

does Simulation-based Inference work?
